QUESTION 32Refer to the exhibit. A technician pastes the configurations in the exhibit into the two new routers shown. Otherwise,

the routers are configured with their default configurations. A ping from Host1 to Host2 fails, but the technician is able to ping the

S0/0 interface of R2 from Host1. The configurations of the hosts have been verified as correct. What is the cause of the problem?

192.168.1.6

A. The serial cable on R1 needs to be replaced.B. The interfaces on R2 are not configured properly.C. R1 has no route to the 192.168.1.128 network.D. The IP addressing scheme has overlapping subnetworks.E. The ip subnet-zero command must be configured on both routers. Answer: C QUESTION 33Refer to the exhibit. Answer: DE QUESTION 36Refer to the exhibit. Based on the exhibited routing table, how will packets from a host within the 192.168.10.192/26 LAN be forwarded to 192.168.10.1?

A. The router will forward packets from R3 to R2 to R1.B. The router will forward packets from R3 to R1 to R2.C. The router will forward packets from R3 to R2 to R1 AND from R3 to R1.D. The router will forward packets from R3 to R1. Answer: C QUESTION 37Refer to the exhibit. What information about the interfaces on the Main\_Campus router is true?

A. The LAN interfaces are configured on different subnets.B. Interface FastEthernet 0/0 is configured as a trunk.C. The Layer 2 protocol of interface Serial 0/1 is NOT operational.D. The router is a modular router with five FastEthernet interfaces.E. Interface FastEthernet 0/0 is administratively deactivated. Answer: B QUESTION 38Refer to the exhibit. C-router is to be used as a "router-on-a-stick" to route between the VLANs. All the interfaces have been properly configured and IP routing is operational. The hosts in the VLANs have been configured with the appropriate default gateway. What is true about this configuration?

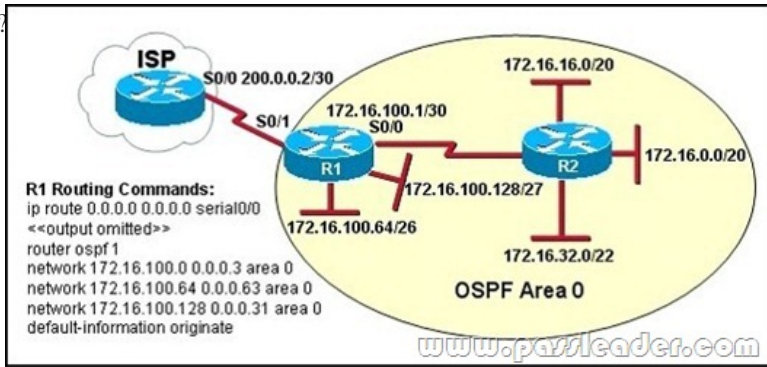

A. These commands need to be added to the configuration:C-router(config)# router eigrp 123C-router(config-router)# network 172.19.0.0B. These commands need to be added to the configuration:C-router(config)# router ospf 1C-router(config-router)# network 172.19.0.0 0.0.3.255 area 0C. These commands need to be added to the configuration:C-router(config)# router rip C-router(config-router)# network 172.19.0.0D. No further routing configuration is required. Answer: D QUESTION 39Refer to the exhibit. Assume that all router interfaces are operational and correctly configured. In addition, assume that OSPF has been correctly configured on router R2. How will the default route configured on R1 affect the operation of R2?

A. Any packet destined for a network that is not directly connected to router R1 will be dropped.B. Any packet destined for a network that is not directly connected to router R2 will be dropped immediately.C. Any packet destined for a network that is not directly connected to router R2 will be dropped immediately because of the lack of a gateway on R1.D. The networks directly connected to router R2 will not be able to communicate with the 172.16.100.0, 172.16.100.128, and 172.16.100.64 subnetworks.E. Any packet destined for a network that is not referenced in the routing table of router R2 will be directed to R1. R1 will then send that packet back to R2 and a routing loop will occur. Answer: E QUESTION 40Refer to the exhibit. Assume that all of the router interfaces are operational and configured correctly. How will router R2 be affected by the configuration of R1 that is shown in the

exhibit?

A. Router R2 will not form a neighbor relationship with R1. B. Router R2 will obtain a full routing table, including a default route, from R1. C. R2 will obtain OSPF updates from R1, but will not obtain a default route from R1. D. R2 will not have a route for the directly connected serial network, but all other directly connected networks will be present, as well as the two Ethernet networks connected to R1.
